

# Common Controls Hub

## Ask Us How Lockpath Keylight and the UCF Common Controls Hub Work Together to Save You Time and Effort

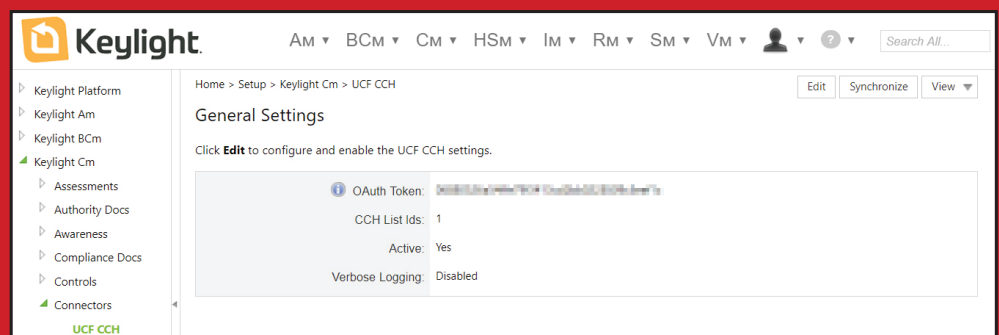

- Harmonize compliance across multiple regulations
- Audit once and attest multiple times
- Stop duplicate tracking of the same mandates in different regulations
- Effortlessly integrate new mandates with existing controls
- Keep up with mounting compliance requirements with timely updates

### Here's How:

1. Start with the UCF Common Controls Hub® (CCH®), the world's largest compliance regulations database. The CCH is the SaaS interface designed to easily extract data from the underlying Unified Compliance Framework® (UCF®).
2. In the CCH, select the regulations your organization needs to comply with, save them into a list, and click the checkbox to share the list. Redundant controls that show up in multiple regulations will be automatically deduplicated.
3. Using Keylight 4.9's new UCF Connector and Unified Compliance's API, connect the Common Controls Hub® to Lockpath Keylight in a few easy steps. Then, import the regulations from the CCH into Keylight to make them actionable.
4. Use UCF Mapper™ to customize your compliance by adding your organization's unique business requirements and internal policies into the UCF, and then into Keylight.
