The Keylight® Platform
Unified Compliance Framework Connector

Keylight®

Automatically transfer regulatory content with the UCF Connector

Unified Compliance Framework (UCF) Connector

New or updated regulations mean downloading regulatory content from UCF's Common Controls Hub (CCH), manually entering the content in a system, updating controls, among other tasks. The Keylight Platform with the UCF connector automatically transfers CCH data to Keylight whenever a user requests it.

Key Features

- Use on-demand sync to automatically transfer CCH regulatory content to Keylight
- Receive content only from subscribed regulations
- Control once, comply with many regulations using UCF's common controls framework.
- Start with CCH controls rather than create your own
- Automatically drive assessments and audits from UCF content
- Save time, less hassle. No more manually entering regulatory content

Streamline regulatory content for more effective compliance management

As a Keylight user with the UCF connector, you can perform an on-demand sync anytime you wish. This instantly brings in authority documents, controls, and citations, including guidance and audit items, from UCF's Common Controls Hub to your Keylight Platform. From there, you can automatically generate assessment templates and audit workpapers.

You also have access to UCF's one set of common controls, which is designed to satisfy compliance requirements for many regulations. The benefits are clear and compelling: lower risk of unmapped controls and less work mapping controls to policies, procedures, and assets.
